

Special Session Call for Papers:

Logistics

Chair:

Assoc. Prof. Dr. Tomaž Kramberger

University of Maribor, Faculty of logistics, Celje, Slovenia

tomaz.kramberger@um.si

Abstract:

Logistics is a scientific discipline of applied nature. The term "logistics" originates from the army. Logistics has emerged from the military necessity of timely and effective care for soldiers, equipment and supplies on the battlefield.

Logistics today models and analysis economic systems in time and space as the flow of materials (goods, information, money and people) through different networks. Its purpose is that, with the help of well-known and recognized scientific methods, offers solutions and methods to implement such networks. Scientific questions, which corresponds logistics, mostly relate to the configuration and organization of such networks, as well as the release and control of material flows across the network. Its main objective is to achieve a balance between economic, ecological and social objectives.

This special session addresses theoretical and empirical studies of logistics problems. Papers dealing with their utilization in operations research are particularly welcome. We look for high-quality research papers that represent novel contributions to the field. Prospective authors are invited to submit original papers, addressing the topics including, but not limited to:

- routing,
- warehousing,
- supply chain management,
- fleet management,
- hinterland modelling,
- retailing,
- and many more.

Note: When submitting the paper, please, select "Special Session: Logistics".
